# Assignment 2: Solution 

Denis Paperno<br>Loria<br>CNRS

TyLex, Voronovo, 07.09.2017

## Task

|  | crowned | says |  | knighthood | delivery |
| :--- | :--- | ---: | ---: | ---: | ---: |

crowned says knighthood delivery child
woman
queen king man

| 49 | -6 |
| ---: | ---: | ---: | ---: | ---: | ---: | ---: |
| 8,1 | $-0,28$ |
| 35 | 2,7 |
| 81 | 2,5 |${ }^{*}$| 1,1 | 1,9 | 0,025 | 0,3 | 2,5 |
| ---: | :--- | ---: | ---: | ---: |
| 11 | 0,17 | 0,24 | 1,3 | -26 |

## Question 1

- 1. What kind of information do the 2 dimensional word vectors encode ? Can you give interpretation to individual dimensions ?

| woman | crowned says knighthood delivery child |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | 49 | -6* | 1,1 | 1,9 | 0,025 | 0,3 | 2,5 |
| queen | 8,1 | -0,28 | 11 | 0,17 | 0,24 | 1,3 | -26 |
| king | 35 | 2,7 |  |  |  |  |  |
| man | 81 | 2,5 |  |  |  |  |  |

## Question 1

- Dimension 2 is associated with gender
- Positive values for man and king
- Negative values for woman and queen
- Dimension 1 correlates with word frequency
- also with the category of 'royalty' but we have too few examples to discriminate it from frequency

| woman |  |  | crowned says knig |  |  | delivery child |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | 49 | -6* | 1,1 | 1,9 | 0,025 | 0,3 | 2,5 |
| queen | 8,1 | -0,28 | 11 | 0,17 | 0,24 | 1,3 | -26 |
| king | 35 | 2,7 |  |  |  |  |  |
| man | 81 | 2,5 |  |  |  |  |  |

## Question 2

- Reconstruct the 5-dimensional vector of woman from the decomposition. How accurate is the reconstruction? Do you find the reconstruction

| woman |  |  | crowned says knighthood delivery child |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | 49 | -6 * | 1,1 | 1,9 | 0,025 | 0,3 | 2,5 |
| queen | 8,1 | -0,28 | 11 | 0,17 | 0,24 | 1,3 | -26 |
| king | 35 | 2,7 |  |  |  |  |  |
| man | 81 | 2,5 |  |  |  |  |  |

- woman=

| woman |  |  | crowned says knighthood delivery child |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | 49 | -6* | 1,1 | 1,9 | 0,025 | 0,3 | 2,5 |
| queen | 8,1 | -0,28 | 11 | 0,17 | 0,24 | 1,3 | -26 |
| king | 35 | 2,7 |  |  |  |  |  |
| man | 81 | 2,5 |  |  |  |  |  |

## Reconstructed vector for woman

- Multiply first line by the latent factor-context table:

|  | crowned says knighthood delivery child |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| woman | 49 | -6* | 1,1 | 1,9 | 0,025 | 0,3 | 2,5 |
| queen | 8,1 | -0,28 | 11 | 0,17 | 0,24 | 1,3 | -26 |
| king | 35 | 2,7 |  |  |  |  |  |
| man | 81 | 2,5 |  |  |  |  |  |

## How big is the error?

| $49 * 1.1+-6 * 11$ | $49 * 1.9+-6 * 0.17$ | $49 * 0.025+-6 * 0.24$ | $49 * 0.3+-6 * 1.3$ | $49 * 2.5+-6 *-26$ |
| :--- | :--- | :--- | :--- | :--- |

| -12.1 | 92.08 | -0.215 | 6.9 | 278.5 |
| :--- | :--- | :--- | :--- | :--- |

| 10 | 82 | 0 | 4 | 285 |
| :--- | :--- | :--- | :--- | :--- |

- Error is noticeable
- Mean square error: 11.32
- Cosine with the original woman vector: 0.91
- Two dimensions are not enough

## Question 3

Assume a linear function that maps a vector of a semantically masculine noun to the corresponding feminine noun, e.g. king to queen. Based on the 2-dimensional vectors for king, queen, man, and woman, estimate the matrix that encodes that function.

## Question 3

- king * $\mathrm{M}=q u e e n$
- man * M=woman

$$
x \quad x^{\prime}
$$

$M=y \quad y^{\prime}$

- man>woman: $81 x+2.5 y=49$; $81 x^{\prime}+2.5 y^{\prime}=-6$
- king>queen: $35 x+2.7 y=8.1 ; 35 x^{\prime}+2.7 y^{\prime}=-0.28$

## Gender mapping matrix

- man>woman: $81 x+2.5 y=49 ; 81 x^{\prime}+2.5 y^{\prime}=-6$
- king>queen: $35 x+2.7 y=8.1 ; 35 x^{\prime}+2.7 y^{\prime}=-0.28$
- Four linear equations with 4 variables, exact solution (values rounded):
$0.85-0.12$
- $M=-8.11 .4$

No exact solution guaranteed with more example pairs
